

GreenFleet AI – Series Seed Pitch Deck

GreenFleet AI – Series Seed Pitch Deck

Company: GreenFleet AI

Sector: Logistics AI

Stage: Seed

Country: Canada

Funding Ask: \$2M (USD)

Financial Documents Provided: No (available under NDA upon request)

Revenue Model: B2B SaaS – Subscription plus usage fees

Current Revenue: \$0 (pre-revenue, active pilots)

Claimed Traction: Pilot with 3 regional fleet operators; 30% fuel savings demonstrated

EXECUTIVE SUMMARY

GreenFleet AI is a Canadian B2B SaaS company that uses artificial intelligence to optimize fleet route planning and reduce fuel consumption for commercial logistics operators across North America.

We are raising a \$2,000,000 Seed round to expand our engineering team, scale our go-to-market motion, and deepen integrations with major fleet management platforms.

PROBLEM

Commercial fleet operators waste up to 35% of fuel costs due to suboptimal routing, idle time, and poor load balancing. Existing solutions are rule-based and cannot adapt to real-time traffic, weather, or demand signals.

SOLUTION

GreenFleet AI's platform continuously re-optimizes routes using machine learning, delivering measurable fuel savings and emissions reductions. Our models are trained on 50M+ historical trip records from Canadian and US fleets.

BUSINESS MODEL

Revenue Model: Subscription (per-vehicle seat license) plus usage fees for on-demand route recalculation API calls.

Pricing: CAD \$120/vehicle/month for core plan; enterprise pricing for 200+ vehicle fleets.

Current Revenue: Pre-revenue (pilot stage). Annual Recurring Revenue: \$0.

We expect to exit pilot phase and begin billing in Q3 2026.

TRACTION

- Signed pilots with 3 regional fleet operators (total 480 vehicles under management across Ontario, Alberta, and British Columbia).

- Demonstrated 30% average fuel savings versus operator baselines in controlled 90-day trials.
